**B.Sc. Hons. (Ife), M.Sc. (Lagos)**

**Matric No: 019042016**

**A THESIS SUBMITTED TO THE SCHOOL OF  
POST GRADUATE STUDIES IN PARTIAL FULFILMENT OF THE  
REQUIREMENTS FOR THE AWARD OF THE DEGREE OF**

**DOCTOR OF PHILOSOPHY (Ph.D.) IN THE  
DEPARTMENT OF CIVIL AND ENVIRONMENTAL ENGINEERING  
OF THE  
UNIVERSITY OF LAGOS**

**JUNE 2011**

**SCHOOL OF POSTGRADUATE STUDIES  
UNIVERSITY OF LAGOS**

**CERTIFICATION**

This is to certify that the Thesis:

**“A SIMPLIFIED NETWORK-LEVEL PAVEMENT INFORMATION AND  
MANAGEMENT SYSTEM (PIMS) FOR FEDERAL ROADS IN NORTH-  
CENTRAL NIGERIA”**

Submitted to the  
School of Postgraduate Studies  
University of Lagos

For the award of the degree of  
**DOCTOR OF PHILOSOPHY (Ph.D.)**  
is a record of original research carried out  
By:

**OLUTAIWO, ADEWALE OLUKAYODE**  
In the Department of Civil & Environmental Engineering

## **DEDICATION**

This thesis is dedicated to GOD Almighty, the Invincible, the Omnipotent, Omniscient and Omnipresent, the Giver and Taker of Life, My ever-present help in times of trouble, My Sustainer and the Preserver of my soul.

To You, I give all the glory and adoration.

## **ACKNOWLEDGEMENTS**

First and foremost, I would like to acknowledge the support and encouragement of my major supervisor, Professor A. S. Adedimila, who inspired me to develop the desire for excellence in technical writings and presentation. He is my chief role model. You are greatly appreciated sir.

I wish to appreciate the love and support of my co-supervisor, Professor M. A. Salau. His constant challenges contributed greatly to the timely completion of this research. The invaluable support and encouragement of Professor F. A. Falade are also greatly appreciated.

I will like to accord special recognition to Kehinde Orolu, who greatly assisted me in the programming works with unparalleled commitment. I pray that God will richly reward his labour of love.

I cannot but appreciate the following people, who in no small ways contributed to this research:- Engr. T. B. Eyo, Head of Research Dept, FERMA for his interest in the work and Engr. Chuckwuma, Head of Pavement Evaluation Unit, Kaduna.

I also wish to specially acknowledge Engr. Felix Atume and Engr. Ezemenari, formerly of the Department of Civil Engineering, Ahmadu Bello University, Nigeria, whose pioneering works in the adaptation of probabilistic prediction modelling to pavement deterioration in Nigeria gave the background information on the research.

I will also like to appreciate the love and support of all the academic staff of the Department of Civil and Environmental Engineering of the University of Lagos, while not undermining the love and support of the secretarial staff.

Finally, I would love to appreciate the support and encouragement of my two lovely kids – Timilehin and Tomiwa Olutaiwo, throughout the duration of the study. I love you so much.

## ABSTRACT

All over the world, the importance of prediction of pavement performance to aid long term scheduling of maintenance and rehabilitation (M&R) activities and budgetary allocation, has been widely recognized. Pavement deterioration modelling, based on historical record of performance variation with time, requires regular measurement of the condition rating of pavement sections over a period of time. Based on the generated model curves using historical data, future condition rating could then be predicted. Since such information and record are absent in the country (Nigeria), this method cannot be used and the alternative is to use probabilistic modelling.

Some attempts have been made to develop deterioration model using the Markov probability matrix method with a constant transition probability matrix (TPM). However, with this approach, the two important effects of pavement age and traffic volume were not reflected. As an improvement over these limitations, this study attempted the development of a more realistic and dynamic pavement deterioration prediction by modelling a series of TPM that incorporate the effects of age and traffic volume on pavement deterioration. Road user costs model was also developed to determine road intervention maintenance costs, and evaluate benefits of reduced vehicle operating cost upon improvement at network level. Detailed analyses of road deterioration and incurred road user costs were performed for a case-study road over a period of twenty (20) year.

A simplified but computerized pavement information and management system (PIMS) was developed, within Matlab<sup>TM</sup> and Visual Basic<sup>TM</sup> environments. The PIMS is capable of storing, analyzing, modifying, reporting and displaying pavement and traffic information for individual and entire network of federal highways in Nigeria. Results can also be displayed in charts and themes.

Visual condition surveys were carried out for twelve selected road sections in the North Central part of Nigeria. Condition evaluations were performed for the surveyed roads using manual and automated PCI-based method. The results showed that the developed PIMS is quite suitable for use on Federal roads in a developing country such as Nigeria.

## TABLE OF CONTENTS

Title Page	i
Certification	ii
Dedication	iii
Acknowledgements	iv
Abstract	v
Table of Contents	vi
List of Tables	xi
List of Figures	xiii
List of Plates	xvi

### CHAPTER ONE: INTRODUCTION

1.1	Preamble	1
1.2	Overview	1
1.3	Condition of the Federal Highways	4
1.4	Maintenance and Rehabilitation of Pavements	5
1.5	Pavement Information and Management Systems (PIMS)	7
1.6	Problem Statement	9
1.7	Research Goal and Objectives	9
1.8	Scope and Limitations of Work	10
1.9	Significance of Study (Research Contributions)	11
1.10	Operational Definition of Terms	12
1.11	Presentation (Dissertation Layout)	13

### CHAPTER TWO: LITERATURE REVIEW

2.1	Overview	14
2.2	Beginning of Pavement Management Systems	14
2.3	Data Collection Activities for PIMS	15
2.3.1	Generating Digital Road Network Maps	15
2.3.2	Referencing Systems	15

2.3.3	Manual Field Data Collection	16
2.3.4	Automated Pavement Data Collection	17
2.3.5	New Developments in Data Collection Technologies	17
2.3.6	Benefits of Automated Data Collection	20
2.3.7	Integration of GPS Data into GIS-PMS	20
2.4	Pavement Condition Rating Systems	21
2.4.1	Present Serviceability Index (PSI)	22
2.4.2	Pavement Condition Index (PCI)	23
2.5	Development of Pavement Performance Models	24
2.5.1	Empirical Models	25
2.5.2	Mechanistic Models	25
2.5.3	Mechanistic-Empirical Models	27
2.5.4	Bayesian Models	27
2.5.5	Survivor Curves	27
2.5.6	Markov Models	28
2.5.7	Semi-Markov Models	28
2.6	Application of Expert System to Pavement Management	29
2.7	Professional PMS Software	31
2.7.1	Micro Paver® Pavement Management System	31
2.7.2	Dynatest PMS	32
2.7.3	TRRL Road Investment Model for Developing Countries (RTIM2)	32
2.7.4	The World Bank's Highway Design and Maintenance Standard Model (HDM-III)	33
2.8	Pavement Condition Evaluation	33
2.9	Visual Pavement Condition Survey in Nigeria	34
2.10	Adopted Methodology for this Research Work	35

### **CHAPTER THREE: DEVELOPMENT OF PCI-BASED PAVEMENT EVALUATION**

3.1	General	36
3.2	Operational Framework of the Developed PIMS	37
3.3	The Pavement Management Process	40
3.4	Basic Road Branch/Section Information	43

3.5	Performing the Visual Pavement Condition Survey	49
3.6	Manual Determination of PCI Value	51
3.7	PCI Calculation for the Selected Surveyed Road Sections	54
3.8	Automated Distress Data Entry and PCI Calculation	55
3.9	Generating Strategies for M&R Actions	58
3.10	Generating Thematic Reports	62
3.11	Referencing System	64
3.12	Thematic Display Capabilities of the Developed PIMS	64
3.13	Procedure for Pavement Performance and User Costs Prediction Modelling	66
3.14a	Markov Approach to Predicting Pavement Performance	67
3.14b	Proposed Markov Modelling	67
3.15	Development of Models for Case Study	68
	3.15.1 Basis for Categorization	68
	3.15.2 Definition of Different States of a Road Pavement Using Road Roughness Measure	68
	3.15.3 Development of Transition Probability Matrices	70
3.16	User Costs Modelling	72
	3.16.1 Vehicle Speeds	73
	3.16.2 Fuel Consumption	74
	3.16.3 Tyre Consumption (Tear and Wear)	75
	3.16.4 Spare Parts Consumption	75
	3.16.5 Maintenance Labour Hours	75
	3.16.6 Crew Hours Cost	76
	3.16.7 Depreciation Cost	76
	3.16.8 Lubricating Oil Consumption	77
	3.16.9 Overheads	77
3.17	Evaluation of User Cost Model	77
	3.17.1 Vehicle Speeds	77
	3.17.2 Fuel Consumption	78
	3.17.3 Tyre Consumption (Tear and Wear)	79
	3.17.4 Spare Parts Consumption	79
	3.17.5 Evaluation of Maintenance Labour Hours	79

3.17.6	Crew Hour Costs (Applicable Only to Trucks)	80
3.17.7	Depreciation Costs	80
3.17.8	Lubricating Oil Consumption	81
3.17.9	Overhead Costs	81
3.17.10	Contribution of Different Components of Vehicle Operating Costs	81
3.18	Maintenance Intervention Modelling	83
3.19	Application of User Costs Analyses to Case Study Road	84
3.19.1	Maintenance Option 1 – Deferred Maintenance	85
3.19.2	Maintenance Option 2 – Repair Failed Sections Only	86
3.19.3	Maintenance Option 3 – Repair All Sections	88
3.20	Benefit-Cost Analyses of Maintenance Investments	90

## **CHAPTER FOUR: RESULTS AND DISCUSSIONS**

4.1	Manual PCI versus Automated PCI Results for the Selected and Surveyed Road Sections	92
4.2	Automated PCI Computation Results	94
4.3	Generating Condition Reports	96
4.4	Generating Predicted Report	103
4.5	Thematic Map Display of Historic PCI, M&R Actions and ADT	104
4.6	Results from Analyses of Maintenance Option 1 (Deferred Maintenance)	108
4.7	Results from Analyses of Maintenance Option 2 (Repair Failed Sections Only)	111
4.8	Results from Analyses for Maintenance Option 3 (Repair All Sections)	113
4.9	Combined Deterioration Profile Results	113
4.10	Results from Benefit-Cost Analyses	115
4.11	Discussion of Results	116

## **CHAPTER FIVE: SUMMARY, CONCLUSIONS AND RECOMMENDATIONS**

5.1	General Summary	121
5.2	Conclusions	123
5.3	Recommendations and Further Research Work	123

5.4	Contribution to Knowledge and Practice	124
